

Motion Unit Test Review Topics

We have used the text a great deal during this unit. It should be used when you study for this test.

We covered most topics in Chapter 5: p. 202-230

Chapter 6: p. 238-240

Chapter 6: p. 248-257- although we did not use these page during class (we did sample problems in your notes) there are many good sample problems on these pages if you want more understanding and practice.

Important terms from this unit are:

p. 202:	reference point	distance	position	motion
	displacement	scalar	vector	uniform motion
p. 220:	speed	constant speed		
	average speed	instantaneous speed		
p. 228:	velocity	constant velocity		average velocity
	instantaneous velocity			p. 238: acceleration

Problem types: →

distance/displacement(d/d)

speed

velocity

acceleration
